

Soil Health Solution Program

We can help your farm turn the corner and start heading in the right direction in regards to the health of your soil...which truly IS the future of your farm.

ECO Soil Health Solution Goals:

Improve the FUTURE of your farm by improving the soil, the very place the future of your farm lies. Reduce salts, improve soil aeration, infiltration, percolation, and drainage. Drastically increase soil biology and LIFE in your soils, and decrease dependence on traditional fertilizer practices through sound agronomic practices and new technologies, all while reducing inputs costs and increasing yield and profitability.

How? Providing Solutions...

- Drainage - Surface and Tile - What's Your Plan?
- Salts - Do You Know How Much of An Issue Your Farm Is Facing?
- Soil Biology - How adding LIFE to your soil will speed up recovery from salts and release the huge "bank" of nutrients already in your soil, decreasing dependency on commercial fertilizers. Learning the differences in commercial "biologicals" and choosing the right one, and incorporating sound agronomic practices on your farm to enhance soil LIFE.
- Nanotechnology - how to incorporate this New Frontier in ag inputs, which is drastically increasing the efficiency of fertilizers while decreasing the amount of applied fertilizer (and salts and impurities).
- Not All Fertilizers Are Created Equally. Do You KNOW What's In Your Fertilizer and How Its Affecting Your Soil Health, both short and long-term?
